LANGUAGES

- **French** — working language
- **English** — fluent

SKILLS

Languages
- Java · TypeScript · PHP · Python · SQL

Web development
- Spring Boot · Laravel · FastAPI
- Angular · React · Vue 3 · Node.js
- REST APIs · Stripe · GDPR

Databases
- PostgreSQL · MySQL · SQLite
- Constraints, triggers, migrations

Architecture
- Microservices · Apache Kafka
- Transactional outbox · events

Cloud and deployment
- Cloudflare · Docker · Linux VPS
- CI/CD · Git · GitHub Actions

AI and automation
- Large language model integration
- Document reading and extraction
- n8n · Make · Zapier · SendPulse

CMS
- WordPress · Elementor · WooCommerce

Ways of working and testing
- Agile (Jira, Trello) · Figma
- PHPUnit · JUnit · Testcontainers

Nathan Princer
Diffo

FULL STACK DEVELOPER — BUSINESS PROCESS DIGITALISATION

I turn processes that live in spreadsheets and Word templates into applications teams use every day. **Ten applications and websites I shipped are live**, four of them fully open source.

PROFESSIONAL EXPERIENCE

MBO Services — Full Stack Developer
Apr – Sep 2026

Marrakech, Morocco · IT services company

- Two core activities ran on shared spreadsheets and hand-copied Word templates: tender responses and recruitment. **I designed, built and shipped both replacement applications.**
- The deadline and scope of supply had to be found by hand in files running to hundreds of pages, some scanned. The tool finds them and **shows the exact passage it took them from**.
- **The HR team switched without changing a habit** — the new tracker uses the exact columns of the spreadsheet it replaced, and exports to the same format.

Hope Traders Academy — Freelance Full Stack Developer
2026

Contract work · training company

- **Three web products delivered end to end**, each with its own site and application — detailed below.
- **Chatbots and automations**: answers to common questions, social posting, email sequences — built with n8n, Make, Zapier and SendPulse **rather than code**, so the client can change them without me.
- Each tool is run directly by the client, with no day-to-day technical involvement.

IAWEB.DEV — Full Stack Web Developer
2023 – 2025

Contract work for Bailey Assurances, CRFPE, Interloc

- Custom web applications for three clients, from interface to database.
- Brochure sites and online stores built from supplied designs; worked alongside design and marketing in an agile setup.

WHAT I HAVE SHIPPED

Factura — Morocco-compliant invoicing

Personal project · open source · live

github.com/diffonathan/factura

- PHP 8.4, Laravel 13, Vue 3 and PostgreSQL. **The legal number is reserved in the same transaction as the invoice**: a failure consumes nothing, and the series stays gap-free.
- The database itself refuses two invoices sharing a number, any rewrite of an issued document, or a payment above the amount due. **103 tests, 246 assertions.**

RDV Santé — appointments and a live waiting queue

Personal project · open source · live

github.com/diffonathan/rdv-sante

- Java 21, Spring Boot 4, Angular 22, Apache Kafka and PostgreSQL. Four autonomous services exchanging events rather than calling one another: **if one goes down the others carry on**.
- **A transactional outbox** guarantees no event is lost or emitted twice; a partial unique index forbids two patients taking the same slot.

Artisans.ma — finding a tradesperson who will actually come

Personal project · open source · live

github.com/diffonathan/artisans-ma

- TypeScript throughout: NestJS and GraphQL on the API, Next.js 16 and React 19 on the front. **Search returns the tradespeople whose declared radius covers the job, not the nearest ones** — a painter 168 km away shows up, a carpenter 30 km away does not.
- A review exists only once the job has been paid for and marked finished, **guaranteed without a foreign key**. **92 API tests, 172 on the front.**

Mizan — assistant to the Moroccan Labour Code

Personal project · open source · live

github.com/diffonathan/mizan

- Python and FastAPI, two-armed retrieval over the 589 articles of the Code. **Any answer citing an article outside the retrieved set is rejected whole** — 31 inventions staged, 31 caught. It declines to answer when nothing matches. **360 tests, standard library only.**

Tender response — internal tool

MBO Services · in service

- Carries a bid from the first document through to the invoice: intake, automated reading, enforced stages, live dashboard. **Built for non-technical users** — every screen carries its instructions.

Recruitment — from stated need to the candidate's first day

MBO Services · in service

- Replaces a shared spreadsheet and folders filed by hand: applicant tracking, hiring documents, automatic archiving. GDPR-compliant — candidate data is deleted once its retention period ends.

Three products for a training company

Freelance · live

- A course and membership platform (subscription, lessons released over time, installable on a phone), an activity journal that **surfaces what keeps recurring**, and a terminal pulling together **five scattered public sources**.

EDUCATION

ESMA — Marrakech, Morocco

2021 – 2023

- **2023** — Bac+5, Software Engineering and Web Services.
- **2022** — Bac+4, Software Engineering and Web Services.
- **2021** — Bac+3, Computer Engineering.
