LANGUAGES

- **French** — working language
- **English** — technical

SKILLS

Languages

- JavaScript · TypeScript · Python · PHP · SQL

Web development

- React · FastAPI · Laravel · Node.js
- REST APIs · HTML · CSS

Databases

- MySQL · PostgreSQL · SQLite

Cloud and deployment

- Cloudflare · Docker · Linux VPS
- CI/CD · Git · GitHub Actions

Payments and security

- Stripe · authentication · GDPR

Applied AI

- Large language model integration
- Document reading and extraction

CMS

- WordPress · Elementor Pro
- WooCommerce · Microsoft 365

Ways of working

- Agile (Jira, Trello) · Figma
- Automated testing

Nathan Princer

Diffo

FULL STACK DEVELOPER — BUSINESS PROCESS DIGITALISATION

I turn processes that live in spreadsheets and Word templates into applications teams actually use every day. **Eight applications and websites I designed and shipped are live.**

PROFESSIONAL EXPERIENCE

MBO Services — Full Stack Developer

Apr – Sep 2026

Marrakech, Morocco · IT services company

- Two of the company's core activities ran on shared spreadsheets and hand-copied Word templates: tender responses and recruitment. **I designed, built and shipped both replacement applications.**
- On a tender, the deadline and scope of supply had to be found by hand in files running to hundreds of pages, some of them scanned. The tool finds them and **shows the exact passage it took them from** — all that is left is to confirm.
- A file can no longer go out with a mandatory step missed: the path is locked, from the first document through to invoicing.
- On the recruitment side, tracking and filing can no longer drift apart — moving a candidate forward files their folder automatically, and hiring documents are generated from templates instead of being copied.
- **The HR team switched without changing a single habit** — the new tracker uses the exact columns of the spreadsheet it replaced, and exports to the same format.

Hope Traders Academy — Freelance Full Stack Developer

2026

Contract work · training company

- **Three web products delivered end to end**, each with its own marketing site and its application: a course and membership platform, an activity journal, and a market analysis terminal.
- Design, development, launch and follow-up: interface, data, subscription billing, transactional email and admin back office.
- Each tool is run directly by the client, with no day-to-day technical involvement.

IAWEB.DEV — Full Stack Web Developer

2023 – 2025

Contract work for Bailey Assurances, CRFPE, Interloc

- Custom web applications for three clients: full development, from interface to database.
- Brochure sites and online stores, built from designs supplied by the design teams; worked alongside design and marketing in an agile setup.

○ Tender response — internal tool

[MBO Services · in service](#)

tracker.mboservices.tech

- Carries a bid from the first document through to the invoice: intake of attachments, automated reading, enforced stages, and a dashboard of live opportunities.
- **Built for non-technical users** — every screen carries its own instructions and a guided tour on first login.

○ Recruitment — from stated need to the candidate's first day

[MBO Services · in service](#)

rh.mboservices.tech

- Replaces a shared spreadsheet and folders filed by hand: applicant tracking, generation of hiring documents, automatic archiving.
- GDPR-compliant — candidate data is flagged for review, then deleted automatically once its retention period ends.

○ Course and membership platform

[Hope Traders Academy · site and application](#)

vip.hopetraders.fr

- Sign-up, subscription billing, content released in stages, messaging with the team, and an admin back office.
- Runs in the browser and **installs on a phone** like a native app.

○ Activity journal

[Hope Traders Academy · site and application](#)

hopejournal.hopetraders.fr journal.hopetraders.fr

- Imports an account's history and turns it into statistics, charts and a calendar; notebook and PDF report export.
- An assistant reads back through the entries and **surfaces what keeps recurring** — the habits you repeat without seeing them.

○ Market analysis terminal

[Hope Traders Academy · site and application](#)

confluenceterminal.hopetraders.fr

- Pulls together **five scattered public data sources** into a single read, across 67 tracked markets. Accounts, free trial, subscription, and alerts ahead of major releases.

○ Two corporate websites on WordPress

[MBO Services · M2CG Ingénierie](#)

mboservices.tech lightgreen-sandpiper-369560.hostingersite.com

- An IT services company and an engineering consultancy: site structure, expertise pages, contact forms and load times.
- **Custom templates rather than a stack of plugins** — both teams keep their own pages alive, without a developer.

EDUCATION

○ ESMA — Marrakech, Morocco

2021 – 2023

- **2023** — Master's level (Bac+5), Software Engineering and Web Services.
- **2022** — Bac+4, Software Engineering and Web Services.
- **2021** — Bachelor's level (Bac+3), Computer Engineering.
